

Welcome

This issue is the very first e-newsletter, designed to keep you up to date with everything we are doing here at MT Cold Storage Solutions.

We are aiming to send it out regularly and hope it will be informative about the range of cold storage solutions, industrial and refrigerated doors we supply and install.

Who are we?

MTCSS, based in rural Worcestershire, offers a range of cold room equipment and industrial and refrigerated doors, and maintenance and spares supplies for cold rooms and refrigerated cabinets. We aim to bring our customers the very best solutions to meet their needs and to install them professionally and efficiently.

Our customers include farmers and growers, and also supermarkets, manufacturers of environmental test chambers to architects, refrigeration and installation contractors and maintenance companies, food manufacturers, major dairies and construction companies.

We are classed within the construction industry, and from that umbrella we operate within a number of markets including farming, growing, data storage, food manufacturing, environmental testing and food and drink retail.

'Top' notch cold storage for top local produce

Top Barn is well known locally for its activity centre and farm shop, but behind the public facing side of the business is also a thriving fresh produce growing enterprise.

Specializing in vegetables grown on site and distributed nationwide, Top Barn Produce supplies to the UK's major supermarket chains, so consistent and optimum freshness and quality has to be guaranteed.

To prepare and store produce including various beans, salad onions and squashes, family-run Top Barn used another local Worcestershire company for the supply and installation of its cold storage rooms, preparation and packing rooms and blast chiller. MTCSS is based at Leigh Sinton and like Top Barn supplies its products and solutions to (amongst other customers) major supermarkets.

Across the facility, MTCSS supplied and installed the varying rooms to meet all necessary food preparation, storage and hygiene standards, as well as the accompanying industrial and refrigerated doors, ranging from controlled atmosphere and sliding to 'to and fro', all specified for maximum efficiency for personnel and fork lift trucks, as well as to maintain necessary temperature and storage conditions.

Top Barn's John Harper comments:

"Without fail MTCSS come in on price, delivery and installation. They work in an efficient, dedicated way to manage and complete each project successfully. The fact they are local in Worcestershire means they always respond quickly with a rapid, reliable service."

MTCSS' Managing Director Martin Borg adds:

"We work with customers all over the country, but Worcestershire is of course one of the UK's best known and highest quality growing areas, so it is an extra pleasure to be working so close to home. We work with a number of growers across Worcestershire and Herefordshire and Top Barn is a particularly impressive example of a local producer."

Product focus – cold storage rooms

Be it chillers, freezers or holding rooms, meat storage, pharmaceutical, clean rooms and data rooms, in whatever size your application demands, MTCSS has the expertise to exceed your requirements through from initial planning meeting, site visits, all aspects of project management to efficient and prompt after sales service and maintenance.

Our Cold Storage Rooms are built using half hour, fire rated panels as standard.

All our engineers are trained to Kingspan standard and hold Pasma, IPAF standards, ISO 9001 and are Chas approved.

Here's what our customers have to say:

"Our goal was to build several cold room chambers with 80mm thick sandwich panels. Incorrect placement of the cold room chambers in the project drawings made our task difficult to fulfil. For this reason, we asked MTCSS who provided us with new plan and helped us sourcing all the materials. Everything was done within project deadlines and MTCSS personnel were very helpful and efficient during the installation process. MTCSS fulfilled our demands completely and the cold room chambers were built according to EU standards. It would be a pleasure to work with them again on our future projects."

Cooling Unit Engineer, Jacob Shanidze, Complex Service
